

SECUREFILE

“ Thirty percent of all businesses that have a major fire fail within a year of the disaster. Of the businesses that survive, seventy percent fail within five years.”

—Home Office Computing Magazine

Simple

Impact provides an easy to install software that automatically backs up files and folders not only on servers but also workstations and laptops. All of the software for Impact's SecureFile is installed in minutes and does not require additional hardware to install, maintain, or learn how to use. Secure backups can be accomplished from any internet connection on or off a domain. Users have access to store data anytime from any place with an internet connection. Recovery of lost files is fast and easy. Quick and easy backup is accomplished by only moving the changes you made to your protected data each time you backup. SecureFile provides unmatched flexibility in storing multiple versions of the same document. Definable down to the individual file. The software provides a process that is as easy to recovery older versions as click and drag.

Safe

A redundant copy of all of your critical information is stored in the secure data center. If your system crashes or your laptop is stolen, your important information is still safe and easily restored at any time of the day or night. Since SecureFile requires no hardware there is no bad media, broken tape drives, misplaced tapes, or faulty CD Drives. Your secure backup process is completely software driven and your backup is stored off-site without the hassle of putting tapes or CDs in another location. The process is fully automated after the initial setup so there is no operator error or forgotten backups. You even receive automated reminders if you did not have a network connection to back up the data.

Secure

Impact SecureFile transfers all information with an encryption up to 256 bits. The information is transferred encrypted based on a private passphrase prior to being transmitted to a secure datacenter. Only you the user have access to the data with the use of the passphrase and password. The information cannot be read or used by anyone else including Impact staff. Once your encrypted information is stored in an Impact data center, only the encrypted changes to your data are transmitted to insure the fastest performance. This process guarantees that the information sent is meaningless to anyone, but you and the encrypted account.

SecureFile by Impact provides an easy to use solution for backing up offsite or mobile PCs

SIMPLE

- Easy Installation
- Backup From Anywhere
- Anytime Access
- Minimum Effort
- Flexible Version Control

SAFE

- Secure Off-Site Storage
- No Hardware to Fail or Maintain
- Automatic Process

SECURE

- 256 Bit Encryption
- Only You Have Access
- Only Transmits Changed Data
